

When everyone's counting on you,
you can count on Plasvacc.

Introducing our
NEW
NORMAL
EQUINE PLASMA
PRODUCT

Leading equine veterinarians trust Plasvacc's quality to improve and save the lives of their patients. **EquiEnteric** is Normal Equine Plasma collected from horses that have been immunized against J-5 E.coli, Salmonella, Equine Rotavirus, and Clostridium Perfringens. When a horse's future is in your hands, what's in your freezer matters.

Plasvacc. Peace of mind is in the bag.

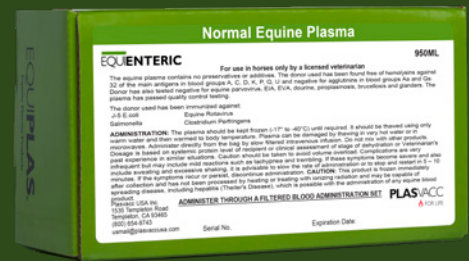

Do you know what's in your plasma?

With Plasvacc plasma you get single-source donor tracking and cell-free plasma. Our donor animals are carefully screened, meticulously cared for, and quarantined.

- **Donors are immunized for:**
J-5 E.coli, Salmonella, Equine Rotavirus, and Clostridium Perfringens
- *Fresh frozen shelf life of 36 months**
- *Sold in 950mL bags*
- *Replacement Guarantee*
- *Donors are quarantined and screened to be free from disease*

* From date of collection

RECOMMENDED USE

Dosage is based on systemic protein level of recipient or clinical assessment of stage of dehydration or Veterinarian's past experience in similar situations. EquiEnteric can be used for volume replacement or any situation that Normal Equine plasma would be called for.

SUPPORT FOR VETERINARIANS, BY VETERINARIANS

With Plasvacc, you get answers from people who speak your language and understand your concerns. Veterinary technical information and product support is available from experienced doctors who use Plasvacc products in their own practices.

For more information or to place an order, contact your local Veterinary Distributor.
